Free Web Proxy Server is a powerful utility that will help you to access the Internet and browse through web pages anonymously without having to rely on third-party web proxies. What is Web Proxy Server? Web Proxy Server is a free software that enables you to surf the Internet using a web proxy server without having to worry about logging in to your ISP's web pages, and to block the so-called web ads. The program enables you to use a free IP address, and this will make it easier for you to navigate through various websites and search engines by hiding your IP address. In addition, you can prevent external sites from checking your information in the log files of your ISP. Why use Web Proxy Server? As you might have guessed, there are many reasons why you need to use Web Proxy Server. Let's take a look at some of them below. Avoiding issues When it comes to Internet usage, Web Proxy Server is the only tool that offers a 100% guarantee of privacy. This is because you can surf the Internet, use a proxy server, and browse the web pages anonymously. However, third-party web proxies such as HotSpot Shield and SpyFu tend to steal your information and log it. Some third-party web proxies may even log the IP address of your browser as well as the IP address of the website that you're browsing. This is one of the reasons why you need to use Web Proxy Server in order to browse the web pages anonymously. Web Proxy Server doesn't log your personal data. Instead, the program merely displays your data through your proxy. Caching of information When it comes to web proxy servers, HotSpot Shield and SpyFu tend to store your information in the cache of your browser. This means that your Internet activity will be stored, and later sent to the ISP's servers. If you use a web proxy such as Free Web Proxy Server, you can browse the Internet and surf through websites without having to wait. Browser's standard browser interface Most proxy servers force you to view a web page through a web proxy server, and you have no choice but to use the interface of the proxy. However, the standard browser interface of Free Web Proxy Server is more intuitive than those of third-party proxies. Therefore, you can simply use it to access web pages, and you don't have to be concerned about any issues. How Web Proxy Server works
